

## Energy Services

*Reducing costs. Reducing your carbon footprint.*

**In a world of uncertain energy markets, can you weather the storm of a sudden disruption in supply?**

**Is energy a growing operational cost? Are you prepared for rapid rises in fuel prices?**

**Is energy management at your facilities haphazard and out-of-control?**

Suddenly, it seems, the world is going “green”, and energy tops the list of environmental concerns. Greenhouse gas reduction, global warming, ‘Peak Oil’, and especially rapidly escalating energy prices are subjects of daily headlines – including on the business pages.

But with hundreds of green products and services thrown at us every day, it can be confusing how to approach this new market and how to effectively reduce emissions in the most economical and practical way.

That’s why we’re here to help.

You’ll make huge strides in reducing energy use and cost, as well as reductions in Carbon emissions. We are dedicated to working thoroughly and systematically in any facility setting, on time and on budget.

### **Efficiency first**

Renewable energy solutions like solar and wind get lots of attention, but their payback pales compared to energy efficiency measures – the nitty-gritty, unglamorous, and often overlooked process of wringing every ‘negawatt’ out of the building envelope, lighting, equipment use, and even employee behavior. At Sustainnovation Consulting, we provide two comprehensive assessments to determine how energy is utilized throughout your facility and its level of efficiency in each area. We accomplish this through our:

- **Energy Flow Analysis**
- **Facility Energy Efficiency Assessment**

# Sustainnovation Consulting is your clear choice for sustainable energy expertise

## ***At Sustainnovation Consulting we start by improving your efficiency...***

With our emerging efficiency methods, we work closely with you to determine the most effective solutions for your company, based on your unique needs. We provide solutions in:

- Energy Efficiency Assessments and Audits
- Utility Contract Assessment
- Installations
- Energy Kaizen
- Engineering Design Retrofits
- Alterations in Energy Usage
- Energy Code Compliance
- Carbon Footprint determination

## ***...then plan and implement Renewable Energy solutions.***

- Federal and State Tax Credits, Rebates, and Grants
- Wind and solar feasibility, siting, permitting, and design
- Geothermal feasibility and design
- Energy Reclamation feasibility and design
- Biomass alternatives

With record breaking carbon emissions, there has never been a better time to invest in the future. At Sustainnovation, we fully understand the environmental, social, economic, and political implications of climate change. We have adopted it as our responsibility to empower businesses to pave their way towards a cleaner, healthier future.
